Finance and Accounting BBA candidate at UW–Eau Claire (May 2027, GPA 3.67) with 2+ years building AI-integrated analytical systems and leading end-to-end implementation in regulated environments. A strong communicator and dependable team player, comfortable operating where the problem does not come with an easy solution, and skilled at building quicker processes that drive more value.

Experience

Credit Analyst & AI Implementation Lead

May 2026 – Present

A community bank in the Upper Midwest

Embedded with the credit team across two engagements while performing standard analyst work in parallel, spreading financials and completing credit risk assessments.

Engagement 01 · Customer Intelligence Map May – Jun 2026

Built a browser-based interactive map plotting 100% of the bank's loan and deposit portfolio with filtering by geography, age and loan type, replacing hours of manual spreadsheet aggregation.

Surfaced how the deposit base is concentrated by customer age, which was invisible before the tool existed. The tool is now used by executives and the board to target outreach and manage risk.

Engagement 02 · Credit Process Rebuild Jun 2026 – Present

Ran a current-state assessment of credit origination, mapped failure points across intake, documentation and risk presentation, and designed a phased delivery roadmap.

Rebuilt credit intake and presentation off a legacy Excel system, cutting request completion from days to hours and automating roughly 90% of repeatable work so analysts focus on judgment calls.

Built a tax return parser pulling financial data from scanned documents behind a pluggable interface, so a vendor-approved method can drop in later.

Prototyped an AI policy assistant letting analysts query credit policy in plain language, reaching a 90% direct answer rate with 100% correct section identification on the remaining queries, pending compliance review.

Independent Researcher · Finance & Enterprise AI Strategy

Jan 2024 – Present

Conduct equity analysis across U.S. markets using Bloomberg Terminal and FactSet, synthesizing findings into research deliverables, financial models and investment theses.

Develop a proprietary portfolio framework integrating full-market sentiment signals across multiple data inputs to construct and actively manage a uniquely structured portfolio.

Lead professor-guided research on whether AI-generated language in SEC filings affects cumulative abnormal returns in the trading days following submission.

Merchandise & Community Outreach Lead

Nov 2024 – Mar 2025

Bonds Social Club

Managed stakeholder outreach across 35+ institutions, developed a go-to-market strategy for 35 merchandise items, secured campus bookstore placement, and generated 5+ sponsor meetings.

Activities & leadership

Southeastern Hedge Fund Competition

Jan 2026 – Present

Built an NLP and machine-learning pipeline processing 5,500+ documents across 487 S&P 500 companies to identify unpriced AI adoption. Live results show a +11.4% spread against a +3.5% benchmark.

Chamber of Commerce Business Liaison

Apr 2026

Selected as one of a small group of Bloomberg-capable students to represent UW–Eau Claire at a Chamber of Commerce breakfast, engaging directly with regional executives and business owners.

Division III Track and Field Captain

Manage a full academic, research and competitive athletic schedule simultaneously, demonstrating discipline and performance under pressure.

Sep 2023 – Present

Education

Bachelor of Business Administration

University of Wisconsin–Eau Claire

Finance major, Accounting minor · focus in Business Analytics · GPA 3.67 · expected May 2027

Artificial Intelligence: Implications for Business Strategy

MIT Sloan School of Management and MIT CSAIL

Skills & strengths
